Filip Karika

Full-Stack Developer focused on Backend & AI Integrations

Prague, Czech Republic | filip.karika1@gmail.com | +420 725 250 010
sknefi.github.io | github.com/sknefi | LinkedIn

Profile

Full-stack developer focused on backend systems and AI integrations, with experience in RAG and technical teaching. BSc in Software Development, graduated with distinction; pursuing AI and IT architecture studies.

Experience

Full-Stack Developer Intern Aug 2026 – Dec 2026 (expected)
42 Prague | Remote

- Contribute to platform development, architectural decisions, and production deployments for 42 Talent Board, connecting job-ready 42 students with employers.
- Work with SvelteKit, TypeScript, Tailwind CSS, Go, PocketBase, SQLite, Docker, and REST APIs.
- Collaborate with an international team across Prague, Vienna, and Warsaw using sprints and a shared backlog.

AI Business Workshop Facilitator Intern Aug 2026 – Dec 2026 (expected)
42 Prague | Hybrid

- Prepare and deliver AI and technology workshops for 42 Prague partners, mainly Škoda Auto and Raiffeisenbank.
- Create course content and Python automation scripts, support participants, and improve the learning platform.

Web Development with AI Mentor Jul 2024 – Jul 2026
Lionscz | Remote

- Created student manuals, then independently developed and remotely taught a web development course with AI tools.
- Covered HTML, CSS, JavaScript, Node.js, Express, MongoDB, REST APIs, and authentication.

Selected Projects

AI Collaborative Workspace | React, Node.js, Express, MongoDB, RAG, WebSockets, Docker Code
Built an invite-only collaboration platform for the 42 *ft_transcendence* project, combining organizations, projects, channels, real-time chat, document management, AI-assisted document retrieval, and role-based access control.

HARDWARIO AI Chatbot | Electron, RAG, OpenRouter, LLM integration Code
Contributed to an open-source chatbot for a bachelor's thesis, helping users search HARDWARIO documentation, understand hardware specifications, and find relevant e-shop products.

Minishell | C, Unix, Bash Code
Implemented a Bash-like shell in C with pipelines, redirections, heredocs, built-in commands, environment variables, and signal handling.

SafeHome | C, Node-RED, MQTT, React, Node.js, Express, MongoDB Project Lead
Led a 10-person team through concept, design, development, and documentation of an IoT home-monitoring application.

Education

Master's studies – AI, Data Science, and Machine Learning 2026 – Present
Prague University of Economics and Business (VŠE), Faculty of Informatics and Statistics

RNCP Level 7 studies – IT Architecture Expert 2026 – Present
42 Prague | Focus: Web Development and Machine Learning

Bachelor's degree – Software Development 2023 – 2026
Unicorn University, Prague | Graduated with distinction (**red diploma**)

Common Core – Software Engineering 2024 – 2026
42 Prague | Completed

Technical Skills

Programming: TypeScript, JavaScript, Python, C, C++
Backend & data: Node.js, Express.js, Flask, REST APIs, MongoDB, Mongoose, SQLite, PocketBase
Frontend: React, SvelteKit/Svelte, Tailwind CSS, shadcn/ui
AI integrations: AI chatbots, RAG, MCP, LLM integration, OpenRouter
Systems, deployment & tools: Linux, Bash, Docker, Nginx, Render, Git, GitHub, Postman, Jira
Languages: Slovak (native), English (B2–C1)
